## Using this booklet

1. Answer the questions in order and show your working.
2. Original question numbers and marks are retained.
3. Print at actual size (100%) for measuring questions.
4. Use the companion answer booklet to check your work.

**Name:** _____ **Date:** _____

Whole questions are retained for context, so some parts assess other specification points. Current and legacy sources are labelled. Continue on extra paper if needed.

Question 02

June 2007 | BLY1B | Original Q8 | Legacy

## QUESTION EIGHT

One theory of evolution states that all different species of living organisms alive today have evolved from much simpler life forms. These simpler life forms first appeared more than three billion years ago.

The remains of extinct animals and plants may form fossils that can be found in rocks.

Fossils are studied to find out how present-day species have changed from earlier species.

**8A** The presence of fossils supports the theory of evolution because . . .

**1** fossil organisms are found in different layers of rocks.

**2** fossil organisms have features in common with present-day organisms.

**3** present-day organisms have evolved from fossil organisms.

**4** adaptation to the environment by fossil organisms caused the development of new species.

**8B** Which of the following is **not** a cause of extinction?

**1** changes in the environment

**2** mutation

**3** new diseases

**4** new predators

**8C** Darwin's theory of evolution via natural selection was only gradually accepted because . . .

**1** books were expensive.

**2** Darwin was not a scientist.

**3** Lamark had a better theory.

**4** the causes of variation were not known at that time.

4.6.3.5 Fossils

**8D** Scientists are uncertain about the origin of life on Earth because . . .

**1** fossils last for only a few million years.

**2** humans evolved later than most other organisms.

**3** new competitors caused the extinction of the earliest organisms.

**4** the earliest organisms had soft bodies.

## QUESTION EIGHT

Darwin and Lamarck were two scientists who had different ideas about how animals and plants have changed over time.

**8A** The idea that animals and plants have changed over millions of years is called . . .

**1** adaptation.

**2** mutation.

**3** evolution.

**4** extinction.

**8B** New explanations about changes in animals and plants are called . . .

**1** observations.

**2** hypotheses.

**3** evidence.

**4** issues.

**8C** In Darwin's and Lamarck's lifetimes, many other scientists did not believe their explanations because of lack of . . .

**1** bias.

**2** hypotheses.

**3** evidence.

**4** issues.

**8D** Most scientists now accept Darwin's explanation because of the discovery of fossils.

This makes his explanation more . . .

**1** accurate.

**2** valid.

**3** theoretical.

**4** biased.

Question 04

March 2009 | BLY1BP | Original Q6 | Legacy

## QUESTION SIX

The photograph shows a fossil which was formed 3 billion years ago.

J.W. Schopf, University of California, *www.ucmp.berkeley.edu*

**6A** There were probably other types of organism in the area when this fossil was being formed.

Why did these other organisms **not** become fossils?

**1** They could move very quickly.

**2** They had soft bodies.

**3** They evolved.

**4** They became extinct.

**6B** Only a few rocks contain fossils that are more than 3 billion years old.

This is because . . .

**1** many fossils have been destroyed.

**2** fossils only last for 3 billion years.

**3** most of the Earth's rocks are under the oceans.

**4** the Earth was created 3 billion years ago.

4.6.3.5 Fossils

**6C** The species that formed this fossil could have died out because . . .

**1** it had no method of reproduction.

**2** it was crushed by rocks.

**3** its ancestors had not become fossils.

**4** its environment changed.

**6D** The theory of evolution states that all living things . . .

**1** have evolved from simple life forms.

**2** will become extinct.

**3** are genetically different.

**4** evolved from apes.

## QUESTION EIGHT

Woolly mammoths are extinct mammals that are related to modern elephants.

**8A** There are several possible reasons for the extinction of the woolly mammoth.

Which one of these was the most likely cause of their extinction?

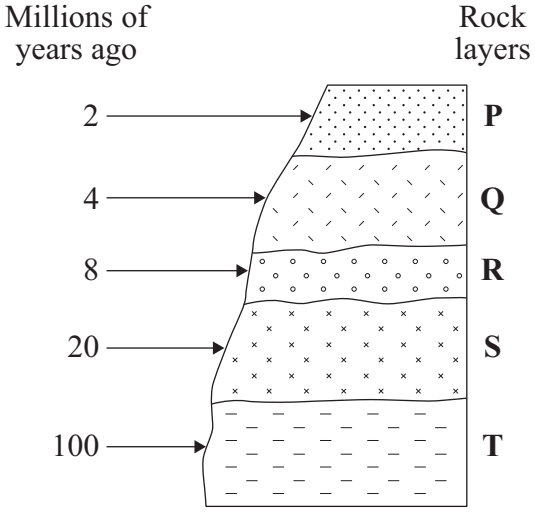

**1** continents moving apart

**2** an increase in the number of plant species

**3** formation of new mountain ranges

**4** an increase in the temperature of the Earth

The diagram shows the rocks in a cliff, which were exposed when other rocks wore away.
The times when these rocks were formed are shown.

Question 05 · continued

**8B** Woolly mammoths lived on Earth between 4.8 million years ago and 4 thousand years ago.

In which layers of rock could woolly mammoth fossils be found?

**1** **T** and **S** only

**2** **Q** only

**3** **R**, **S** and **T** only

**4** **P** and **Q** only

**8C** Living things are thought to have developed over 3 billion years ago. We cannot be sure what these living things looked like.

This is because . . .

**1** no rocks were being formed 3 billion years ago, so there are no fossils.

**2** geological activity has destroyed many of the fossils.

**3** there are no records because humans had not evolved then.

**4** scientists are unable to agree on their appearance.

**8D** Recently, a pregnant female woolly mammoth was discovered preserved in ice. The cells of this mammoth are still in good condition. Scientists plan to transfer the nucleus from a mammoth skin cell into an elephant egg cell from which the nucleus has been removed. After the cell is given an electric shock, it will be transferred to the womb of a female elephant.

What term is used to describe this process?

**1** tissue culture

**2** sexual reproduction

**3** adult cell cloning

**4** taking cuttings

## QUESTION EIGHT

The diagram shows a section through rock layers containing fossils.

**8A** Which layers of rock are probably the same age?

**1** **R** and **W**

**2** **S** and **X**

**3** **T** and **Z**

**4** **U** and **Y**

**8B** Which of these statements about rocks and fossils is true?

**1** Older fossils are usually found in deeper rocks.

**2** Rocks of the same age in a particular area will contain fossils of totally different life forms.

**3** The deeper the rock, the more different types of fossil are found.

**4** Fossils are never found in surface layers of rocks.

**8C** There are few fossils of the earliest organisms on Earth.

This is because . . .

**1** fossils last for only a few million years.

**2** the organisms had soft bodies.

**3** the organisms quickly became extinct.

**4** new predators ate the organisms.

4.6.3.5 Fossils

Question 06 · continued

**8D** The fossils in the rock layers support the theory of evolution because . . .

**1** the same fossil organisms are found in different layers of rocks.

**2** fossil organisms have features in common with present-day organisms.
