AQA GCSE Physics | 8463

SPECIFICATION POINT 4.8.1.1

Our solar system

Mark schemes and examiner comments

Tier	**Higher**
Question groups	**24**
Available paper years	**2003–2024**

Using this booklet

1. Booklet answer numbers match the question booklet.
2. Use the original question number within marking tables.
3. Examiner comments are included where available.

Name: _____ **Date:** _____

Where a precise marking extract is unavailable, the full source document is included in an appendix. Any missing mark scheme is explicitly identified.

4.8.1.1 Our solar system

Answer 01 · Mark scheme June 2003 | 3451H | Original Q4 | Legacy

The full source mark scheme begins on page 34. Follow original question 4 in that document.

Answer 02 · Mark scheme June 2003 | 3462H3 | Original Q4 | Legacy

The full source mark scheme begins on page 56. Follow original question 4 in that document.

Answer 03 · Mark scheme June 2005 | 3451 | Original Q2 | Legacy

The full source mark scheme begins on page 73. Follow original question 2 in that document.

Answer 04 · Mark scheme June 2005 | 3451 | Original Q5 | Legacy

The full source mark scheme begins on page 73. Follow original question 5 in that document.

Answer 05 · Mark scheme June 2005 | 3451 | Original Q8 | Legacy

The full source mark scheme begins on page 73. Follow original question 8 in that document.

4.8.1.1 Our solar system

Answer 06 · Mark scheme June 2005 | 3462 | Original Q2 | Legacy

The full source mark scheme begins on page 91. Follow original question 2 in that document.

Answer 07 · Mark scheme June 2005 | 3462 | Original Q6 | Legacy

The full source mark scheme begins on page 91. Follow original question 6 in that document.

Answer 08 · Mark scheme June 2006 | 3451 | Original Q8 | Legacy

The full source mark scheme begins on page 105. Follow original question 8 in that document.

Answer 09 · Mark scheme June 2006 | 3462 | Original Q6 | Legacy

The full source mark scheme begins on page 125. Follow original question 6 in that document.

4.8.1.1 Our solar system

Answer 10 · Mark scheme

Question 3

question	answers	extra information	mark
(a)(i)	ellipse / elliptical	allow ovoid / oval	1
(ii)	focus		1
(iii)	gravitational attraction (between the Sun and the planet)	allow '(force of)gravity' allow 'force due to mass of the planet and mass of the Sun' do **not** credit references to 'weight' **not** just 'the Sun'	1
(iv)	the greater the distance then the greater the time (taken) **or** the converse	allow 'it's longer if it's further away (from the Sun)'	1
(b)	either box ticked	credit is for the reason not just for ticking a box **example** arguing about the classification is a distraction which does not really matter (at the moment) **example** new evidence may cast doubt on any decision taken now **example** (Sedna) cannot be (correctly) classified until the nature of its orbit is known **example** (the object could be a comet / an asteroid do **not** credit 'could be a meteor'	1
total			5

Answer 13 · Mark scheme

Question 2

question	answers	extra information	mark
(a)(i)	the higher the altitude the longer the period	**or** the converse **or** there is a positive correlation do **not** credit any reference to 'direct proportion' ignore references to speed / size of orbit allow the higher the altitude the longer it takes to orbit do **not** credit if ambiguity between distance and time	1
(a)(ii)	responses must refer to the (quality) of the data rather than comments on satellites any **two** from: • only four pairs (of results / data / evidence) • the data is (all) for low or high altitudes (with nothing in the middle) • conclusion only valid in the range (shown, of 300 ↔ 36 000 or 1.5 ↔24) • the Internet is not always a reliable source	**or** 'not enough / insufficient data	2
(b)	there is a **centripetal** force the force (for this) is provided by gravity / gravitational attraction between the Moon and the Earth	accept force towards centre / Earth **or** 'the Moon is accelerating towards the (centre of) Earth' accept 'caused by gravity'	1 1

Question 2 continues on the next page

PHY3H

Question 2 continued

question	answers	extra information	mark
(c)	there is <u>empty</u> space / a vacuum	**or** no medium / particles / air / gas (to carry the sound / vibrations) do **not** accept any named gas **or** sound(s) do not travel through a vacuum	1
(d)	the response may be in agreement or disagreement or may support a 'balanced' argument **either** any general point with appropriate amplification for **2** marks **or** two general points **1** mark each	 eg costs a lot (1) the money could be spent on …(1) eg we may find new resources (1) eg we may contact aliens (1)	2

4.8.1.1 Our solar system

INFORMATION FOR EXAMINERS

1. General

The mark scheme for each question shows:

- the marks available for each part of the question;
- the total marks available for the question;
- the typical answer or answers which are expected;
- extra information to help the Examiner make his or her judgement and help to delineate what is acceptable or not worthy of credit or, in discursive answers, to give an overview of the area in which a mark or marks may be awarded.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example:
where consequential marking needs to be considered in a calculation;
or the answer may be on the diagram or at a different place on the script.

In general the right hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent.

2. Emboldening

2.1 In a list of acceptable answers where more than one mark is available 'any **two** from' is used, with the number of marks emboldened. Each of the following lines is a potential mark.

2.2 A bold **and** is used to indicate that both parts of the answer are required to award the mark.

2.3 Alternative answers acceptable for a mark are indicated by the use of **or**. (Different terms in the mark scheme are shown by a / ; e.g. allow smooth / free movement.)

3. Marking points

3.1 Marking of Quality of Written Communication

Examiners are reminded of the need to assess QoWC by the following statement appearing in the appropriate parts of the mark scheme:

The answer to this question requires ideas in good English in a sensible order with correct use of scientific terms. Quality of written communication should be considered in crediting points in the mark scheme.

The maximum marks available to a candidate whose answer is not well expressed will be (the number of marks available –1).

4.8.1.1 Our solar system

3.2 Marking of lists

This applies to questions requiring a set number of responses, but for which candidates have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error/contradiction negates each correct response. So, if the number of error/contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution? (1 mark)

Candidate	Response	Marks awarded
1	4,8	0
2	green, 5	0
3	red*, 5	1
4	red*, 8	0

Example 2: Name two planets in the solar system. (2 marks)

Candidate	Response	Marks awarded
1	Pluto, Mars, Moon	1
2	Pluto, Sun, Mars, Moon	0

3.3 Use of chemical symbols/formulae

If a candidate writes a chemical symbol/formula instead of a required chemical name, full credit can be given if the symbol/formula is correct and if, in the context of the question, such action is appropriate.

3.4 The marking of quantitative relationships

Full credit can be given for a correct quantitative relationship expressed in:

- named units;
- physical quantities;
- standard symbols;
- a combination of physical quantities and units.

No credit can be given for any quantitative relationship expressed in terms of:

- a combination of physical quantities, units and symbols;
- a diagram, e.g. the ohm's law triangle, unless the rest of the answer shows clearly that the candidate understands the relationships involved.

3.5 Marking procedure for calculations

3.5.1 Full marks can be given for a correct numerical answer, as shown in the column 'answers', without any working shown. However, if the answer is incorrect, mark(s) can be gained by correct substitution/working and this is shown in the 'extra information' column.

3.5.2 Where calculations are based on incorrectly recalled relationships, neither the incorrectly recalled relationship, nor the resulting calculation based on the incorrect relationship, will be credited.

3.6 Interpretation of 'it'

Answers using the word 'it' should be given credit only if it is clear that the 'it' refers to the correct subject.

3.7 Errors carried forward

There should be no error carried forward from a previous answer which has been based on wrong science. Any error in the answers to a structured question should be penalised once only.

Examples

(a) A candidate who calculates average speed using speed = time/distance **and** then proceeds to use this incorrect answer to calculate an acceleration based on the correct quantitative relationship should be given credit for the use of the correct acceleration relationship but none for either numerical answer.

(b) A candidate who incorrectly calculates average speed using speed = distance/time and then proceeds to use this incorrect value to calculate an acceleration based on the correct quantitative relationship, should be given credit for the use of both correct quantitative relationships **and** for the correct substitution and use of the incorrect value in the calculation of the rate of acceleration.

Papers should be constructed in such a way that the number of times errors can be carried forward are kept to a minimum. Allowances for errors carried forward are most likely to be restricted to calculation questions and should be shown by the abbreviation e.c.f. in the marking scheme.

3.8 Phonetic spelling

The phonetic spelling of correct scientific terminology should be credited **unless** there is a possible confusion with another technical term.

3.9 Brackets

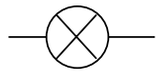

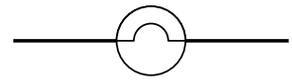

(…..) is used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

3.10 Unexpected Correct Answers not in the Mark Scheme

The Examiner should use professional judgement to award credit where a candidate has given an unexpected correct answer which is not covered by the mark scheme. The Examiner should consult with the Team Leader to confirm the judgement. The Team Leader should pass this answer on to the Principal Examiner with a view to informing all examiners.

4.8.1.1 Our solar system

3451/F Q1

question	answers	extra information	mark
(a)	circuit symbol for a lamp correct   circuit symbol for a cell correct	accept  accept any standard of drawing providing circuit would work	1 1
	2 lamps drawn in parallel with 3 cells	polarity of cells must be correct (+ to –) but cells may be either way around	1
(b)	4.5		1
(c)	the same as	accept any clear indication of the correct answer	1

4.8.1.1 Our solar system

INFORMATION FOR EXAMINERS

1. General

The mark scheme for each question shows:

- the marks available for each part of the question;
- the total marks available for the question;
- the typical answer or answers which are expected;
- extra information to help the Examiner make his or her judgement and help to delineate what is acceptable or not worthy of credit or, in discursive answers, to give an overview of the area in which a mark or marks may be awarded.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example:
where consequential marking needs to be considered in a calculation;
or the answer may be on the diagram or at a different place on the script.

In general the right hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent.

2. Emboldening

2.1 In a list of acceptable answers where more than one mark is available 'any **two** from' is used, with the number of marks emboldened. Each of the following lines is a potential mark.

2.2 A bold **and** is used to indicate that both parts of the answer are required to award the mark.

2.3 Alternative answers acceptable for a mark are indicated by the use of **or**. (Different terms in the mark scheme are shown by a / ; e.g. allow smooth / free movement.)

3. Marking points

3.1 Marking of Quality of Written Communication

Examiners are reminded of the need to assess QoWC by the following statement appearing in the appropriate parts of the mark scheme:

The answer to this question requires ideas in good English in a sensible order with correct use of scientific terms. Quality of written communication should be considered in crediting points in the mark scheme.

The maximum marks available to a candidate whose answer is not well expressed will be (the number of marks available –1).

4.8.1.1 Our solar system

3.2 Marking of lists

This applies to questions requiring a set number of responses, but for which candidates have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error/contradiction negates each correct response. So, if the number of error/contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution? (1 mark)

Candidate	Response	Marks awarded
1	4,8	0
2	green, 5	0
3	red*, 5	1
4	red*, 8	0

Example 2: Name two planets in the solar system. (2 marks)

Candidate	Response	Marks awarded
1	Pluto, Mars, Moon	1
2	Pluto, Sun, Mars, Moon	0

3.3 Use of chemical symbols/formulae

If a candidate writes a chemical symbol/formula instead of a required chemical name, full credit can be given if the symbol/formula is correct and if, in the context of the question, such action is appropriate.

3.4 The marking of quantitative relationships

Full credit can be given for a correct quantitative relationship expressed in:

- named units;
- physical quantities;
- standard symbols;
- a combination of physical quantities and units.

No credit can be given for any quantitative relationship expressed in terms of:

- a combination of physical quantities, units and symbols;
- a diagram, e.g. the ohm's law triangle, unless the rest of the answer shows clearly that the candidate understands the relationships involved.

3.5 Marking procedure for calculations

3.5.1 Full marks can be given for a correct numerical answer, as shown in the column 'answers', without any working shown. However, if the answer is incorrect, mark(s) can be gained by correct substitution/working and this is shown in the 'extra information' column.

4.8.1.1 Our solar system

3.5.2 Where calculations are based on incorrectly recalled relationships, neither the incorrectly recalled relationship, nor the resulting calculation based on the incorrect relationship, will be credited.

3.6 Interpretation of 'it'

Answers using the word 'it' should be given credit only if it is clear that the 'it' refers to the correct subject.

3.7 Errors carried forward

There should be no error carried forward from a previous answer which has been based on wrong science. Any error in the answers to a structured question should be penalised once only.

Examples

(a) A candidate who calculates average speed using speed = time/distance **and** then proceeds to use this incorrect answer to calculate an acceleration based on the correct quantitative relationship should be given credit for the use of the correct acceleration relationship but none for either numerical answer.

(b) A candidate who incorrectly calculates average speed using speed = distance/time and then proceeds to use this incorrect value to calculate an acceleration based on the correct quantitative relationship, should be given credit for the use of both correct quantitative relationships **and** for the correct substitution and use of the incorrect value in the calculation of the rate of acceleration.

Papers should be constructed in such a way that the number of times errors can be carried forward are kept to a minimum. Allowances for errors carried forward are most likely to be restricted to calculation questions and should be shown by the abbreviation e.c.f. in the marking scheme.

3.8 Phonetic spelling

The phonetic spelling of correct scientific terminology should be credited **unless** there is a possible confusion with another technical term.

3.9 Brackets

(…..) is used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

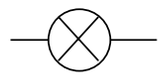

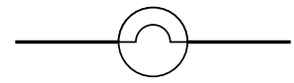

3.10 Unexpected Correct Answers not in the Mark Scheme

The Examiner should use professional judgement to award credit where a candidate has given an unexpected correct answer which is not covered by the mark scheme. The Examiner should consult with the Team Leader to confirm the judgement. The Team Leader should pass this answer on to the Principal Examiner with a view to informing all examiners.

Mark Scheme

2005 examination – June series

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Mark Scheme

2006 examination - June series

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

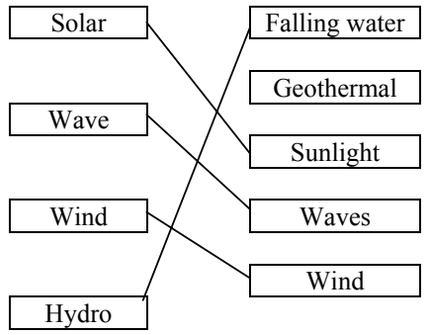

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

(ii)	less diffraction	accept no diffraction accept gates <u>absorb</u> sound / noise / waves accept gates <u>reflect</u> sound / noise / waves do **not** accept rebounds / stops / blocks out	1
total			5

4.8.1.1 Our solar system

Answer 22 · Examiner comments — June 2018 | 8463/2H | Original Q8

Question 8 (Standard/high and High demand)

08.1 Just over half the students wrote answers that were worthy of some credit but often only gained a single mark, which was usually for a match to the third marking point. It was very unusual to see acceleration mentioned. Frequent incorrect answers were in terms of variations in the radius of the satellite's orbit, despite it being shown as circular in Figure 14. Other students commented on the physical geography of the Earth having an effect on the orbit or the velocity being affected by the Earth's magnetic field. A few students stated that the satellite was falling on the right hand side and getting faster as a result.

08.2 Over 50% of the students completed this calculation correctly to score all five marks. A further 10% of the students scored four marks because they rounded the number of orbits to 16. Some of students incorrectly used 300 km as the length of the orbit.

08.3 This part was generally well answered with just over 70% of students scoring this mark.

08.4 About 50% of the answers matched one of the marking points but few students scored both marks. Some students expressed the view that the predicted and actual values for the radius of Uranus' orbit were too different to support the prediction. Many answers referred to Uranus or the Solar System rather than Bode's prediction or equation.

Answer 23 · Examiner comments — June 2023 | 8463/2H | Original Q6

06.1

88% of students scored this mark. The vast majority of responses seen said 'satellite', with a small number giving the alternative 'moon'.

06.2

61% of students were able to achieve full marks for this calculation. Those that did not, didn't convert the wavelength into metres, or converted incorrectly. Most students were able to give their answer in standard form.

06.3

Many students only scored the compensation mark and it was rare to see answers where acceleration towards Earth was included. Few students linked a change in direction to a change in velocity, with some describing the converse.

06.4

6% of students gained full marks for this explanation. students scored a mark for the 2nd or 3rd marking point, and it was unusual to have to consider the award of the compensation mark. A significant number of students thought that galaxies A and B were emitting radiation with a greater wavelength than that emitted by the Sun.

4.8.1.1 Our solar system

Answer 24 · Examiner comments June 2024 | 8463/2H | Original Q3

03.1
Generally, well answered with 50% of students gaining all 3 marks for naming types of object that make up our solar system, and 35% getting 2 marks. Many students did not make the distinction between artificial and natural satellites. A number listed different stages in the life cycle of stars.

03.2
94% of students chose the star mostly likely to become a black hole. A common incorrect answer was Cynus A, the star with the lowest mass.

03.3
56% of students were able to convert gigametres to metres.

03.4
This is always a difficult topic for students. Many students recognised that galaxy A is travelling faster. A large number of students didn't clearly state the light spectra were showing red-shift or that the galaxies were moving away from us, so were unable to achieve the first and / or the second mark points. Students who stated the light spectra were showing red-shift often went on to achieve all 3 marks (17%).

03.5
63% of students scored all 4 marks for this calculation of time. The most common error was not converting the distance to metres. Some students got confused dividing numbers in standard form, ending up with an incorrect power.

Answer 24 · Examiner comments June 2024 | 8463/2H | Original Q3

03.6
23% of the students were able to give a complete account of how all the elements larger than hydrogen formed and achieve level 2. 24% gave partial accounts that missed out a stage and a 25% gave only a beginning, a middle or an end. The remainder mentioned the lives of stars without mentioning fusion or the processes at all, or clearly had no idea what a star was or described chemical bonding of gas molecules. 47% of the students gained 1 or 2 marks in this question but those who achieved level 2 showed a good understanding beyond recall, suggesting that this topic has been well established in the teaching and is one that many students have a passion for.
