AQA GCSE Combined Science - Trilogy | 8464

SPECIFICATION POINT 6.7.2.3

Electric motors (HT only)

Mark schemes and examiner comments

Tier	**Higher**
Question groups	**3**
Available paper years	**2019–2022**

Using this booklet

1. Booklet answer numbers match the question booklet.
2. Use the original question number within marking tables.
3. Examiner comments are included where available.

Name: _____ **Date:** _____

Where a precise marking extract is unavailable, the full source document is included in an appendix. Any missing mark scheme is explicitly identified.

6.7.2.3 Electric motors (HT only)

Answer 01 · Mark scheme

Question	Answers	Extra information	Mark	AO / Spec. Ref.	ID
04.1			1	AO1 6.7.2.2	A
04.2	reverse the direction of the current reverse the direction of the magnetic field		1 1	AO1 6.7.2.2	E
04.3	B = 0.360 (T) 0.072 = 0.360 × I × 0.050 $I = \frac{0.072}{(0.360 \times 0.050)}$ I = 4.0 (A)	an answer of 4.0 (A) scores **4** marks allow a correct substitution using an incorrectly / not converted value of B allow a correct rearrangement using an incorrectly / not converted value of B allow a correct calculation using an incorrectly / not converted value of B	 1 1 1 1	AO2 6.7.2.2	E

6.7.2.3 Electric motors (HT only)

Answer 01 · Mark scheme

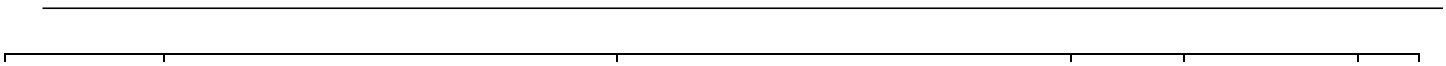

June 2019 | 8464/P/2H | Original Q4

04.4	there is a magnetic field (due to the permanent magnet) **and** current in a wire causes a magnetic field current is in opposite directions in each side of the coil so forces act in opposite directions on either side of the coil (the split ring ensures that) the current in the left / right side of the coil is always in the same direction	 allow (the split ring ensures that) the force in the left / right side of the coil is always in the same direction allow the current reverses each half rotation	1 1 1 1	AO1 6.7.2.3	E
Total			**11**

Question 4

Question	Answers	Extra information	Mark	AO / Spec. Ref.
04.1	there is a magnetic field due to the (permanent) magnets and the current in the wire produces a magnetic field		1 1	6.7.2.1 AO1

Question	Answers	Extra information	Mark	AO / Spec. Ref.
04.2	use (Fleming's) left hand rule	allow place first two fingers and thumb of left hand at right angles to each other	1	6.7.2.2 AO1
	place first finger in direction of the field lines **and** place second finger in direction of current		1	
	then thumb will show direction of the force	allow thumb points downwards allow force is downwards	1	

6.7.2.3 Electric motors (HT only)

Answer 03 · Mark scheme

June 2022 | 8464/P/2H | Original Q4

Question	Answers	Extra information	Mark	AO / Spec. Ref.
04.3	any **one** from: • more turns of the wire on the coil • increase the current in the coil	allow use a cell with a greater potential difference	1	6.7.2.3 AO1
	• stronger magnet this will increase the force on the coil (due to the motor effect)	allow move the coil closer to the magnet ignore bigger magnet	1

Question 4 (standard demand and standard/high demand)

04.1 33% of students knew that the field was strongest at the poles.

04.2 12% of students were able to correctly describe how the diagram showed that the field was not the same at all places. Many incorrect answers did not refer to ay feature of Figure 4.

04.3 40% of students gained 1 mark on this question. Most of them identified that the electromagnet could be easily demagnetised. A further 8% went on to say that this meant that the pieces of metal could be easily removed.

Some of the 40% that scored 1 mark scored the mark because they said that electromagnets are (generally) stronger.

04.4 20% of students could name one of the magnetic metals, and 20% of those students could name both the metals. Of those that could only name 1 magnetic metal, there was an approximately even number for each correct answer.

04.5 Approximately 35% of students scored one mark, nearly all of these suggested increasing the current. Only a handful of students also suggested moving the electromagnet closer and scored 2 marks.

04.6 This standard/high demand calculation was reasonably well answered. Nearly 40% scored 3 or 4 marks for a correct calculation, but either did not recall the unit, did not convert the length or did neither. 5% of students scored full marks.

04.7 30% of students scored at least 1 mark for getting at least 1 word correct and in the correct place. 10% were able to write the correct word in the correct place for each finger.

The majority of students that scored 0 marks wrote words that were not related to electromagnetism.

6.7.2.3 Electric motors (HT only)

Answer 03 · Examiner comments June 2022 | 8464/P/2H | Original Q4

Question 4 (Standard and standard/high demand)

04.1 Nearly 50% of students were able to gain at least 1 mark. This was mainly for stating that there is a magnetic field due to the permanent magnets, or describing the field. Only about 10% went on to say that a current in the wire produces a magnetic field.

04.2 Nearly 50% of students were able to gain at least 1 mark on this question. Those that only scored 1 mark correctly stated that Fleming's left hand rule, or just the left hand rule, should be used. Half of students that scored the first mark failed to gain any further credit as they were then unable to describe what the direction of each finger represents.

04.3 Just over 50% of students scored at least 1 mark for giving one change that would increase the speed of rotation. Less than 10% were able to explain that the change would increase the force exerted on the coil. Many students mentioned using a bigger magnet instead of stronger magnet.
